Learn to Effectively Manage Chronic Pain, and Fulfill DEA Training Requirement

The opioid epidemic is affecting communities across the country, leading to a widespread fear of prescribing. As a result, many patients with serious illness are unable to access safe and appropriate pain management, leading to unnecessary suffering for people with chronic pain. CAPC's clinical training unit, [Chronic Pain Strategies for Patients with Serious Illness](#), provides a comprehensive approach to managing chronic pain in patients living with serious illness. Learn how to:

Build patient trust, understand the biological basis of chronic pain, and describe non-pharmacological and non-opioid treatments

Prescribe an opioid trial for the management of a seriously ill patient's chronic pain

Understand universal precautions to identify and assess opioid misuse, and prevent opioid use disorder (OUD)

Identify and manage OUD, and treat pain in seriously ill patients with OUD

[View our article](#) to find out how this curriculum can help you meet your state's CME requirements around opioids/prescribing.

CAPC members can take these courses and earn free continuing education credits and CAPC Designation. Physicians earn free ABIM Maintenance of Certification (MOC) credits.

CAPC's Go-To Resource to Meet DEA Training Requirements

DEA-registered clinicians, CAPC developed a [Learning Pathway](#) to help you to meet the requirements set by the DEA, as part of the Medication Access and Training Expansion (MATE) Act. The requirement mandates that clinicians complete 8 hours of training on the treatment and management of patients dealing with opioid or other substance use disorders before renewing their DEA registration.

By completing all courses in this [Learning Pathway](#), clinicians can fulfill this requirement, provide the necessary attestation, and receive a certificate.
